

# Whatbot document

## What this bot do?

This is bot to automating whatsapp messaging to use in other apps by calling APIs.

## How to use the bot?

**Installation:** you can clone app from <https://github.com/artaabbasi/wp-sender> and put it in your web server.

You may need *rabbitmq* on your server to start so you can get it from <https://www.rabbitmq.com/> and install it.

*On your server beside django app you should start “wp-sender-rmq.py” manually.*

*You can config your chromdriver path in “wp-sender-rmq.py” to make sure the app is running correctly.*

**Getting Start:** after running both django and rmq app you can use APIs,

## APIs:

`"/whatsapp/sendmessage/"` : you can call this url with post method to send messages

Body sample:

```
{
  "data":[
    {
      "text":"Hi User",
      "phones":[
        "989120000000",
        "989250000000"
      ]
    },
    {
      "text":"Hi User2",
      "phones":[
        "989120000000"
      ]
    }
  ]
}
```

`"/base/auth/login/"` : you can call this url with post method to login your user and get your access token

Body sample:

```
{
  "username":"myusername",
  "password":"mypassword"
}
```
